BAN/SET

Power Ace® Narrow (3V, 5V, 8V)

Extra efficient narrow section belt provides high horsepower ratings.

Use fewer belts per drive, and save weight, space, and cost. Belt flexes easily around small sheaves, operates cooler, and lasts longer.

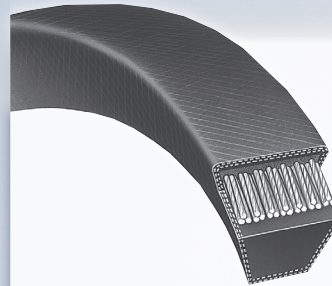

Consider Power Ace® for all new drives.

BAN/SET

Power King® Cog (AX, BX, CX) **Power Ace® Cog** (3VX, 5VX)

Energy efficient rawedge molded cog belts run cooler, last longer, and can accommodate smaller diameter sheaves, reducing costly maintenance and downtime.

Power King® (A, B, C, D, E)

Constructed of oil and heat resistant neoprene compound and high strength polyester cords, these classical section belts are designed to cut operating costs and reduce maintenance on multiple belt drives.

Power King® Combo (B, C, D) **Power Ace® Combo** (3V, 5V, 8V)

Stabilize problem drives where belts flip over or jump off sheaves due to shock loads with banded combo belts, built with a tough oil and heat-resistant tie band.

BAN/SET System eliminates matching requirements.
